

**FIBERRUNNER®** Installation Detail 5.0

**INSTALLATION  
OVER EQUIPMENT  
BAYS**

The Panduit 4x4 or 6x4 **FIBERRUNNER** channel can be used as branching lines to route cables along equipment bays where the jumper cables will be terminated. Branching runs are typically installed directly to central office infrastructure and provide transitions from horizontal run to the front of the uprights on each side of the equipment bay.

See page 2 for detail of typical installation over equipment frames.
